### HOMWORK FOR LAB 3: FORCE AND MOTION

1. You are given 10 identical springs. Describe how you would develop a scale of force (i.e., a means of producing repeatable forces of a variety of sizes) using these springs. First, arrange Springs in various combinations: 3 scenarios for this:

For Part 2, use their data as first 10 displacements from the zero configuration.

- 1) Series - Springs connected in series
- 2) Parallel - Springs are connected in parallel
- 3) mixed - Combination of series and parallel

2. Describe how you would use an uncalibrated force probe and the springs in Question 1 to develop a quantitative scale of force. How could you measure forces that do not correspond to exact numbers of stretched springs?

The Spring scale and the balance both measure the weight of an object. The balance measures the weight of an unknown object with that of a standard weight. The Spring scale compares the displacement of the spring with the force needed to extend the spring. It is based on Hooke's Law ( $F = kx$ ) showing that the force is proportional to the displacement on a spring constant  $k$ .

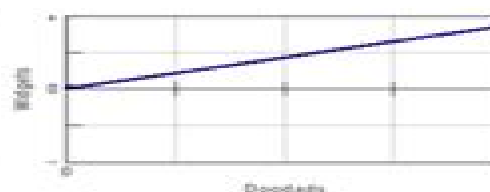

3. What is meant by a proportional relationship? Is this the same as a linear relationship? Explain.

A proportional relationship is a relationship between 2 variables where their ratios are equivalent.

4. Given the table of data below for widgets and doodads, how would you determine if the relationship between widgets and doodads is a proportional one? Sketch on the axes to the right of the table what the graph would look like if widgets are proportional to doodads.

Yes, the relationship between doodads & widgets is proportional because it passes through the origin (widgets (0,0) & doodads (0,0))

Widgets	Doodads
0.0	0.0
150.5	10.0
300.0	20.0
442.7	30.0
601.3	40.0

**Beyond the Cradle: Artificial Intelligence and the Destiny of Humanity**

Austin Gboru, 2025-08-21 Beyond the Cradle argues that Earth is not a prison to flee but a cradle to outgrow responsibly

Humanity's next chapter will be written with artificial intelligence not as a rival species but as a co-evolving partner. This book traces how energy, ecology, and computation shape the fate of civilizations, why sustainability is a survivability technology, and how brain-like efficient AI can operate as a planetary nervous system that keeps the biosphere within safe bounds. It contrasts philosophies of progress on Earth and in orbit, from electrified mobility to reusable rockets, and makes the case that the ethics we encode in our machines must withstand vacuum as well as village. The central claim is simple: if AI cannot help us govern the home world wisely, it has no business governing new ones. Through first principles reasoning, evolutionary insight, and engineering pragmatism, *Beyond the Cradle* outlines a thousand-year project for sustainable intelligence: the alignment of energy, minds, and institutions to keep the cradle while daring to grow beyond it. *Energy Research Abstracts*, 1993. Semiannual with semiannual and annual indexes. References to all scientific and technical literature coming from DOE, its laboratories, energy centers, and contractors. Includes all works deriving from DOE, other related government-sponsored information, and foreign nonnuclear information. Arranged under 39 categories, e.g., Biomedical sciences, basic studies, Biomedical sciences applied studies, Health and safety, and Fusion energy. Entry gives bibliographical information and abstract. Corporate author, subject, report number indexes. "A Revised and Intensified Science and Technology Curriculum Grades K-12 Urgently Needed for Our Future", 1983. 2004 Physics Education Research Conference. Jeffrey Marx, Paula Heron, Scott Franklin, 2005-09-29. The 2004 Physics Education Research (PER) Conference brought together researchers in how we teach physics and how it is learned. Student understanding of concepts, the efficacy of different pedagogical techniques, and the importance of student attitudes toward physics and knowledge were all discussed. These Proceedings capture an important snapshot of the PER community, containing an incredibly broad collection of research papers of work in progress. **Government Reports Announcements & Index**, 1996. **Teaching and Learning Advances on Sensors for IoT**. Sergio Martin, 2021-04-14. This book focuses on all the technologies involved in improving the teaching and learning process of some of the sensor-based IoT topics, such as virtual sensors, simulated data acquisition, virtual and remote labs for IoT sensing, gamification, experiences, and innovative teaching materials, among others. In particular, the articles inside the book show excellent works about hot topics such as Remote labs for IoT teaching, including the full development cycle, Practical guides for IoT cybersecurity, Innovative multimodal learning, analytics architecture that builds on software-defined networks and network function virtualization principles, Problem-based

learning experiences using designed complex sensor based IoT ecosystems with sensors actuators microcontrollers plants soils and irrigation systems Block based programming extensions to facilitate the creation of mobile apps for smart learning experiences The articles published in this book present only some of the most important topics about sensor based IoT learning and teaching However the selected papers offer significant studies and promising environments      *Government Reports Announcements & Index ,1988*
