Complexity in Economic and Social Systems Stanisław Drożdż, Jarosław Kwapien, Paweł Oświęcimka, 2021-05-11 There is no term that better describes the essential features of human society than complexity On various levels from the decision making processes of individuals through to the interactions between individuals leading to the spontaneous formation of groups and social hierarchies up to the collective herding processes that reshape whole societies all these features share the property of irreducibility i.e. they require a holistic multi level approach formed by researchers from different disciplines This Special Issue aims to collect research studies that by exploiting the latest advances in physics economics complex networks and data science make a step towards understanding these economic and social systems The majority of submissions are devoted to financial market analysis and modeling including the stock and cryptocurrency markets in the COVID 19 pandemic systemic risk quantification and control wealth condensation the innovation related

performance of companies and more Looking more at societies there are papers that deal with regional development land speculation and the fake news fighting strategies the issues which are of central interest in contemporary society On top of this one of the contributions proposes a new improved complexity measure *Building the Skyline* Jason M. Barr,2016 The Manhattan skyline is one of the great wonders of the modern world But how and why did it form Much has been written about the city s architecture and its general history but little work has explored the economic forces that created the skyline This book chronicles the economic history of the Manhattan skyline In the process the book debunks some widely held misconceptions about the city s history Part I lays out the historical and environmental background that established Manhattan s real estate trajectory before the Skyscraper Revolution at the end of the 19th century The book begins with Manhattan s natural and geological history and then moves on to how it influenced early land use and neighborhood formation and how these early decisions eventually impacted the location of skyscrapers Part II focuses specifically on the economic history of skyscrapers and the skyline investigating the reasons for their heights frequencies locations and shapes The book discusses why skyscrapers emerged downtown and why they appeared three miles to the north in midtown but not in between Contrary to popular belief it was not due to the depths of Manhattan s bedrock nor the presence of Grand Central Station Rather midtown s emergence was a response to the economic and demographic forces that were taking place north of 14th Street after the Civil War The book also presents the first rigorous investigation of the causes of the building boom during the Roaring Twenties Contrary to conventional wisdom the boom was largely a rational response to the economic growth of the nation and city The last chapter investigates the value of Manhattan Island and the relationship between skyscrapers and land prices Finally an Epilogue offers policy recommendations for a resilient and robust future skyline

Co-Owned Properties in Turkish Law and Pursuance of Solutions Eylem Apaydin, 2011-01-18 This book provides a critical evaluation of the statutory framework for co ownership regulations in Turkish law and it acquaints Turkish jurists with the existence of trust of land in English law It is posited upon the argument that solutions to the problems observed in the administration and enjoyment of co owned properties in Turkish law may be overcome by the introduction of a new institution which is inspired by the trust mechanism in English law This renders the existing Turkish regulation for the management of the co owned properties outdated unreasonably complex and extremely artificial with some assumptions After successfully establishing that the Turkish system is currently inadequate to provide an efficient system this book provides the indications for a solution Being aware of the limitations of the Turkish legal system and the restricted possibility of the direct reception of trust this book examines to what extent the current institutions in Turkish law would replace the functions of trust in the context of co ownership This examination results in searching for a new system as it is concluded that any of the trust like devices in the current Turkish law could not effectively and comprehensively serve the purposes that the English trust does Therefore this book suggests that a new mechanism inspired by the English trust of land would provide the required mechanisms for an efficient managerial system for co owned properties Rather than asserting to solely focus on a comprehensive new system this book discusses the possible solutions and urges further research about the matter Hence the so called alien system trust of land and its capability to provide an alternative but efficient and productive solution to the managerial problems of the co owned properties would be made familiar with the Turkish jurists
