

**Question:**

Two long parallel wires, oriented along the  $y$ -axis as shown, contain currents  $I$  and  $2I$ , flowing in opposite directions. Which of the following statements is true?

- a. The magnetic field due to  $I$  circles that wire in a counterclockwise direction.
- b. The magnetic force from wire  $2I$  on wire  $I$  is twice as strong as the force on wire  $I$  from wire  $2I$ .
- c. The magnetic force between the two wires is proportional to the inverse square of the distance between them.
- d. The force on wire  $2I$  is in the  $+x$  direction.
- e. The force on wire  $2I$  is in the  $-z$  direction.

©2009, Richard White. LearnAPphysics.com

**Answer:**

The correct answer is *d*. The magnetic field due to wire  $I$  circles that wire in a clockwise direction, as determined using the Right Hand Rule. This field is down (in the  $-z$  direction) at the location of wire  $2I$ . By applying another Right Hand Rule, we can determine that the magnetic force on  $2I$  due to this magnetic field is in the  $+x$  direction.

Wire  $2I$  has a force equal in magnitude on wire  $I$ . The magnetic force between the two wires can be determined as follows:

Magnitude of magnetic field due to  $I$  :

$$B = \frac{\mu_0 I}{2\pi r}, \text{ where } r \text{ is the distance between the wires}$$

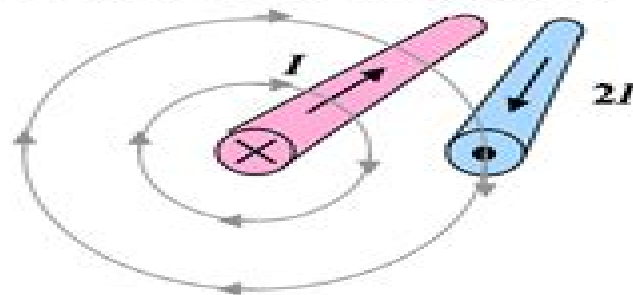

Force on wire  $2I$  due to this field :

$$F_B = I\ell \times B$$

$$F_B = (2I)\ell \times \frac{\mu_0 I}{2\pi r}$$

The force per unit length of the wires, then, is:

$$\frac{F_B}{\ell} = \frac{\mu_0 2I^2}{2\pi r}$$

Magnetic Field Effects in Low-Dimensional Quantum Magnets Adam Iaizzi, 2018-11-28 This thesis is a tour de force combination of analytic and computational results clarifying and resolving important questions about the nature of quantum phase transitions in one and two dimensional magnetic systems The author presents a comprehensive study of a low dimensional spin half quantum antiferromagnet the J Q model in the presence of a magnetic field in both one and two dimensions demonstrating the causes of metamagnetism in such systems and providing direct evidence of fractionalized excitations near the deconfined quantum critical point In addition to describing significant new research results this thesis also provides the non expert with a clear understanding of the nature and importance of computational physics and its role in condensed matter physics as well as the nature of phase transitions both classical and quantum It also contains an elegant and detailed but accessible summary of the methods used in the thesis exact diagonalization Monte Carlo quantum Monte Carlo and the stochastic series expansion that will serve as a valuable pedagogical introduction to students beginning in this field
