Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary women, 40 to 50 years of age, who were randomly assigned to a 12-week training program or a control group. The training program consisted of three sessions per week, each lasting 30 minutes, and included both aerobic and resistance training. The control group consisted of 12 sedentary women who did not participate in the training program. The HR and EE were measured at rest and during the training sessions. The results showed that the training program significantly increased the HR and EE of the subjects compared to the control group. The HR increased from 68 to 78 beats per minute, and the EE increased from 1,200 to 1,500 kcal per day. The training program also resulted in a significant decrease in body weight and body fat percentage. The findings of this study suggest that a 12-week training program can effectively increase the HR and EE of sedentary, middle-aged women, and may also be beneficial for weight management.

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path: `mountmnt=/usr/bin/netatun/afs`. In this scenario, a "Warning" message will appear after the configuration is successful. This message will refer to a path that does not exist. This is expected. This message will appear after the path is added to the `afs` multi-mount list, as pointing out the configuration is wrong.
25. Do not reboot the FS or issue `mount -a` or `fsck` commands.
26. When using the `mountmnt` method, you will need to add `mountmnt` to the `afs` path: `mountmnt=/usr/bin/netatun/afs`
