Bone Quantitative Ultrasound Pascal Laugier, Quentin Grimal, 2022-05-05

Many significant achievements in new ultrasound technologies to measure bone and models to elucidate the interaction and the propagation of ultrasonic waves in complex bone structures have been reported over the past ten years Impaired bone remodeling affects not only the trabecular compartment but also the cortical one Despite the crucial contribution of the cortical structure to the whole bone mechanical competence cortical bone was understudied for a long time A paradigm shift occurred around 2010 with a special focus placed on the importance of cortical bone This has sparked a great deal of interest in new ultrasound techniques to assess cortical bone While our book *Bone Quantitative Ultrasound* published in 2011 emphasized techniques to measure trabecular bone this new book is devoted for a large part to the technologies introduced recently to measure cortical bone These include resonant ultrasound spectroscopy guided waves scattering and pulse echo and tomography imaging techniques Instrumentation signal processing techniques and models used are detailed Importantly the data accumulated in recent years such as anisotropic stiffness elastic engineering moduli compression and shear wave speeds of cortical bones from various skeletal sites are presented comprehensively A few chapters deal with the recent developments achieved in quantitative ultrasound of trabecular bone These include i scattering based approaches and their application to measure skeletal sites such as the spine and proximal femur and ii approaches exploiting the poro elastic nature of bone While bone fragility and osteoporosis are still the main motivation for developing bone QUS this Book also includes chapters reporting ultrasound techniques developed for other applications of high interest such as 3 D imaging of the spine assessment of implant stability and transcranial brain imaging This book together with the book *Bone Quantitative Ultrasound* published in 2011 will provide a comprehensive overview of the methods and principles used in bone quantitative ultrasound and will be a benchmark for all novice or experienced researchers in the field The book will offer recent experimental results and theoretical concepts developed so far and would be intended for researchers graduate or undergraduate students engineers and clinicians who are involved in the field The book should be considered as a complement to the first book published in 2011 rather than a second edition in the sense that basic notions already presented

in the first book are not repeated *CARS 2004* H. U. Lemke, Heinz U. Lemke, 2004 Almost 500 paper and poster contributions from more than 30 countries had to be evaluated for CARS 2004 In addition to the traditional CARS themes and topics emphasis has been given to developments such as IHE Surgical Workflow and PACS Operation Room of the Future and Strategic Thinking In special congress sessions partner societies such as SPIE and SCAR have joined these endeavours to assist in achieving progress in these fields While the increased reliance on multi source information is proceeding at a rapid rate it is interesting to note that the basis for the greater part of medical decision making is still medical imaging This may change as genomics and proteomics fulfil more of their potential but it is estimated that more than half of current hospital visits result in imaging studies In that respect it is true that the more things change the more they stay the same Alphonse Karr 1849 and that medical imaging is the cornerstone of the field This focus on medical imaging is evident throughout the CARS conference with sessions dedicated to Medical Imaging MI itself Image Processing and Display IPD Image Guided Radiological Therapy IGRT Image Guided Therapy IGT and separate symposia on Computer Aided Diagnosis based on imaging and both Cardiovascular and Maxillofacial Imaging Still it is up to you the engineers scientists clinicians and related personnel participating in CARS to ensure that innovation in technology and procedures is not developed just for the sake of change but instead to achieve progress and thereby provide better patient care
