

## NDT Test Station Repeatable Manual Inspection

The Modal Shop's NDT Test Station, Model NDT-TS2 Resonant Inspection System is an ideal Resonant Acoustic Method testing system when repeatable manual inspections are required. The innovative Test Station provides a means of repeatable manual inspections by allowing precise control of part positioning with an adjustable table ranging up to 6.25 inches (158.75 mm) in height. Photo eye sensors trigger the integrated industrial impactor when a part is in position.

Once impacted, the objective part inspection requires no human interpretation. The system includes a laptop PC, running NDT-RAM software which acquires data for analysis from each part and then delivers a simple Pass or Fail result. The included light tower provides a clear, visual indication of a part's test status after impact for the operator to sort the part accordingly.

The NDT-TS2 includes the following components, preassembled in a turnkey system:

- Light tower for visual part status indication
- Photo eye sensors for automated impact trigger
- Aluminum frame with adjustable table
- Laptop PC mounted on adjustable swing arm
- PLC control
- Industrial impactor and foot trigger switch
- Microphone
- LanSharc™ Smart Digital Controller
- NDT-RAM™ software

As with all Resonant Inspection systems from The Modal Shop, testing ensures fast, objective sorting of parts. Quality testing has never been easier.

**Aeronautical Applications of Non-destructive Testing** Abbas Fahr, 2013-12-05. Comprehensive guide to the basic principles and applications of non-destructive testing methods for aircraft system and components: airframe, propulsion, landing gear, and more. Provides detailed analysis of the advantages and disadvantages of major NDT methods. Important for design, inspection, maintenance, repair, corrosion protection, and safety. This critical book is among the first to provide a detailed assessment of non-destructive testing methods for the many materials and thousands of parts in aircraft. It describes a wide variety of NDT techniques and explains their application in the evaluation and inspection of aerospace materials and components, ranging from the entire airframe to systems and subsystems. At the same time, the book offers guidance on the information derived from each NDT method and its relation to aircraft design, repair, maintenance, and overall safety. The book covers basic principles as well as practical details of instrumentation, procedures, and operational results, with a full discussion of each method's capabilities and limitations as these pertain to aircraft inspection and different types of materials, e.g., composites and metal alloys. Technologies covered include optical and enhanced optical methods, liquid penetrant, replication, and magnetic particle inspection, electromagnetic and eddy current approaches, acoustics, and ultrasonic techniques, infrared, thermal imaging, and radiographic methods. A final section is devoted to NDT reliability and ways the probability of detection can be measured to establish inspection intervals.
