The Physical Signature of Computation Neal G. Anderson, Gualtiero Piccinini, 2024 Anderson and Piccinini offer the most systematic rigorous and comprehensive account of computational implementation to date Their robust mapping account holds that the key for establishing that a computation is physically implemented is that the physical states bear neither more nor less information than the computational states they map onto

Physics of Radiation and Climate Michael A. Box, Gail P. Box, 2015-10-14 Our current climate is strongly influenced by atmospheric composition and changes in this composition are leading to climate change Physics of Radiation and Climate takes a look at how the outward flow of longwave or terrestrial radiation is affected by the complexities of the atmosphere's molecular spectroscopy This book examines the planet in

Sea Level Change and Maritime Boundaries Antoine Grima, 2023-06-23 Climate change is modifying in varying measure the coastal geography of States The phenomenon is not temporary but is expected to carry on during the 21st century and beyond A distinctive feature of modern international

law is the concept of maritime zones Each maritime area is subject to an intricate scheme of States rights and obligations Coastal geography is a fundamental component of a long standing method developed and agreed upon between States to establish the outward limits of these areas A feature of this method is the baseline In international law it is the only reference line from where the outward limits of maritime zones are measured There are clear rules on how this is established along a coast There is a concern amongst a number of States that rising sea water levels as a result of climate change may compel them to shift their baselines inward thus affecting the outward limits of their maritime zones It is clear that the stability of maritime boundaries is put into question and this may bring about serious political legal and economic repercussions This concern may also affect the outcome of dispute settlement procedures before a competent international court or tribunal the purpose of which is to resolve overlapping maritime claims Key questions emerge What is the role played by coastal geography in the legal regime determining the outward limits of maritime zones What are the consequences of changes to coastal geography To what extent are dispute settlement procedures before a Court or Tribunal immune from this concern Is international law able to address this If so in what way and what are its limits What can be done to resolve this **Our**

explores this topic from various angles and levels as well as highlighting the determinants that influence micro and macro level decisions in this area It presents an in depth and unique analysis of the sources of funding for environmental measures implemented by European Union institutions against the backdrop of national expenditure by Member States and analyses the plausibility of the adopted targets in the run up to 2050 in the context of the war in Ukraine and ad hoc energy policy solutions This book is a voice in an ongoing discussion among the community of practitioners and theoreticians on sources of financing for the energy transition to achieve independence from Russian sources in the quickest possible timeframe It demonstrates that environmental measures cannot occur without the financial participation of economic actors and financial institutions particularly the capital market and further underscores the scale of involvement in environmental projects as measured by the value of green loans and green bonds covered by European financial institutions The authors offer policy recommendations for financing activities related to environmental policy notably energy transition This book will appeal to scholars students and researchers of corporate finance banking strategic and public finance management as well as policymakers and practitioners involved in green finance investments

Social Capital, Resilience and Adaptation on Small Islands Jan Petzold, 2017-03-24 The book deals with the role of social capital regarding its potential to increase small islands adaptive capacity to climate change The case study of the Isles of Scilly UK shows how social structures can play a very important role for climate change adaptation It is argued that social features have to be understood in a non deterministic and potentially ambivalent manner according to their place specific geographical cultural and historical context Only then risk management and adaptation strategies can succeed and function in a sustainable way The findings have relevance for the further refinement of social capital theory and social emergence Combined with the perspective of resilience this approach is also relevant from a policy standpoint given that small islands have been identified as hotspots not only due to their vulnerability but also because they serve as examples for media and politics to advance the agenda of environmental protection

Modeling and Simulation of Carbon Emission Related Issues Wen-Hsien Tsai,2019-08-19 Carbon emissions reached an all time high in 2018 when global carbon dioxide emissions from burning fossil fuels increased by about 2.7% after a 1.6% increase in 2017 Thus we need to pay special attention to carbon emissions and work out possible solutions if we still want to meet the targets of the Paris climate agreement This Special Issue collects 16 carbon emissions related papers including 5 that are carbon tax related and 4 energy related papers using various methods or models such as the input output model decoupling analysis life cycle impact analysis LCIA relational analysis model generalized Divisia index

model GDIM forecasting model three indicator allocation model mathematical programming real options model multiple linear regression etc The research studies come from China Taiwan Brazil Thailand and United States These researches involved various industries such as agricultural industry transportation industry power industry tire industry textile industry wave energy industry natural gas industry and petroleum industry Although this Special Issue does not fully solve our concerns it still provides abundant material for implementing energy conservation and carbon emissions reduction However there are still many issues regarding the problems caused by global warming that require research

Climate, Planetary and Evolutionary Sciences Guido Visconti, 2021-04-14 This book presents the result of an innovative challenge to create a systematic literature overview driven by machine generated content Questions and related keywords were prepared for the machine to query discover collate and structure by Artificial Intelligence AI clustering The AI based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary for example climate planetary and evolution sciences Springer Nature has published much on these topics in its journals over the years so the challenge was for the machine to identify the most relevant content and present it in a structured way that the reader would find useful The automatically generated literature summaries in this book are intended as a springboard to further discoverability They are particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new to the topics Springer Nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to Master or PhD thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples It is important to us as a publisher to make the advances in technology easily accessible to our authors and find new ways of AI based author services that allow human machine interaction to generate readable usable collated research content
