 Bridgman Perkins,2017-08-16 Appraising cancer as a major medical market in the 2010s Wall Street investors placed their  
 bets on single technology treatment facilities costing 100 300 million each Critics inside medicine called the widely  
 publicized proton center boom crazy medicine and unsustainable public policy There was no valid evidence they claimed that  
 proton beams were more effective than less costly alternatives But developers expected insurance to cover their centers  
 staggeringly high costs and debts Was speculation like this new to health care Cancer Radiation Therapy and the Market  
 shows how the radiation therapy specialty in the United States later called radiation oncology coevolved with its device  
 industry throughout the twentieth century Academic engineers and physicians acquired financing to develop increasingly  
 powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital and  
 freestanding procedure units to utilize them In the process they incorporated market strategies into medical organization  
 and practice Although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific research all  
 too often found serious patient harm and disappointing beneficial impact on cancer survival This thoroughly documented and  
 provocative inquiry concludes that public health policy needs to re evaluate market driven high tech medicine and build  
 evidence based health care systems      **House documents** ,1880      **Monthly Catalogue, United States Public**
