*Federal Register*, 2000-07-07      Blind Landings Erik M. Conway, 2006-11-04 When darkness falls storms rage fog settles or lights fail pilots are forced to make instrument landings relying on technology and training to guide them through typically the most dangerous part of any flight In this original study Erik M Conway recounts one of the most important stories in aviation history the evolution of aircraft landing aids that make landing safe and routine in almost all weather conditions Discussing technologies such as the Loth leader cable system the American National Bureau of Standards system and its descendants the Instrument Landing System the MIT Army Sperry Gyroscope microwave blind landing system and the MIT Radiation Lab s radar based Ground Controlled Approach system Conway interweaves technological change training innovation and pilots experiences to examine the evolution of blind landing technologies He shows how systems originally intended to produce routine all weather blind landings gradually developed into routine instrument guided approaches Even so after two decades of development and experience pilots still did not want to place the most critical phase of flight the landing entirely in technology s invisible hand By the end of World War II the very concept of landing blind therefore had disappeared from the trade literature a victim of human limitations

**History of Acquisition in the Department of Defense, Volume 1** Elliott V. Converse, 2012-06-12 This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960 the decade and a half that spanned the Truman and Eisenhower

administrations following World War II These instruments of warfare aircraft armored vehicles artillery guided missiles naval vessels and supporting electronic systems when combined with nuclear warheads gave the postwar American military unprecedented deterrent and striking power 1 They were also enormously expensive The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods The first roughly coinciding with President Truman s tenure covers the years from the end of World War II through the end of the Korean War in 1953 The second spans the two terms of the Eisenhower presidency from 1953 through early 1961 The year 1953 marked a natural breakpoint between the two periods The Korean War had ended President Eisenhower and his defense team began implementing the New Look a policy and strategy based on nuclear weapons which they believed would provide security and make it possible to reduce military spending The New Look s stress on nuclear weapons along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology profoundly influenced acquisition in the services throughout the 1950s and the remainder of the century As used in this study the term acquisition encompasses the activities by which the United States obtains weapons and other equipment In surveying the history of acquisition between 1945 and 1960 this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period but it is not a weapons encyclopedia Instead it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies organizations and processes and the various forces influencing weapons programs
