(Class - VIII)

Question 6:

Explain why fossil fuels are exhaustible natural resources.

Answer 6:

Fossil fuels are formed over a period of millions of years, by the action of high temperature and high pressure on the remains of dead plants and animals. These fossil fuels are exhaustible natural resources because if these are exhausted by human activities, cannot be recreated in a short period of time.

Question 7:

Describe characteristics and uses of coke.

Answer 7:

Coke is a tough porous and black substance. It is produced by destructive distillation of coal.

- It is an almost pure form of carbon.
- It is used as domestic as well as an industrial fuel in stoves and furnaces.
- It is used in the manufacture of steel.
- It gives little or no smoke.
- It is used for extraction of metals.
- It can be used to make fuel gases.

Question 8:

Explain the process of formation of petroleum.

Answer 8:

Petroleum was formed from organisms living in the sea. As these organisms died, their bodies settled down at the bottom of the sea and got covered with sand and clay. The absence of air, high pressure and high temperature for over millions of years transformed the dead organisms into petroleum and natural gas. The petroleum deposits are usually found mixed with salt water. The petroleum is lighter than salt water, and hence, floats over it.
