

Support does not always hold true and a break below support signals that the bulls have lost over the bears. A fall below support level indicates more willingness to sell and a lack of willingness to buy. A break in the levels of support indicates that the expectations of sellers are reducing and they are ready to sell at even lower prices. In addition, buyers could not be coerced into buying until prices declined below support or below the previous low. Once support is broken, another support level will have to be established at a lower level.
