(c) **Outline** the measures that should be in place for a successful evacuation of a workplace in the event of a fire. (8)

**Answer**

- (a) The main sources of ignition which lead to fire such as incorrectly installed electrical equipment; machinery and plant which was badly maintained such as friction caused by inadequate lubrication; chemical reactions that may give off heat; hot work such as welding or cutting; smoking materials which are discarded in an unsafe manner; hot surfaces such as those on cooking or heating appliances; sparks from cold working such as grinding; and static electricity arising from the incorrect transfer of flammable liquids.
- (b) The ways of reducing the risk of a fire starting in a workplace include the control of smoking and smoking materials; good housekeeping to prevent the accumulation of waste paper and other combustible materials; regular lubrication of machinery to prevent sparks; regular inspection of electrical equipment for damage; ensuring that electrical systems are not overloaded and isolating equipment that is not in use; ensuring ventilation outlets on equipment are not obstructed; controlling hot work by permits or by the creation of designated areas; providing proper storage facilities for flammable liquids away from sources of ignition; segregating incompatible chemicals and implementing security procedures to reduce the risk of arson.
- (c) The measures include: the provision of means for detecting the fire and for raising the alarm; an acceptable distance to the nearest available exit; escape routes of sufficient width and fire protected; clear signing of escape routes; the provision of emergency lighting; escape routes kept clear of obstructions with fire doors closed to prevent the spread of smoke; the provision of fire fighting equipment; the appointment and use of fire marshals; procedures for the evacuation of those with a physical impairment (in relation to hearing, sight or mobility); the identification of a safe assembly point and the need to practice the evacuation plan at regular intervals.

(b) **Outline FOUR** control measures to reduce the risk of injury to operators of pedestal drills. (4)

Cutting hazards may also be presented by metal swarf produced by the drilling process.
- (b) Control measures which could reduce the risk of injury to operators include ensuring stop/start controls, emergency stop devices and isolator switches are operative; the fitting of robust and adjustable guarding around the chuck and drill bit; ensuring the regular removal of swarf round the drill bit to prevent build up; the removal of the chuck key before putting the drill into motion; ensuring the operators are trained and competent and are not wearing items of loose clothing and/or jewellery; the provision of personal protective equipment such as eye and face protection and introducing procedures for the regular maintenance of the machine.
