Pennock, 2019-08-13 An exploration of the scientific mindset such character virtues as curiosity veracity attentiveness and humility to evidence and its importance for science democracy and human flourishing Exemplary scientists have a characteristic way of viewing the world and their work their mindset and methods all aim at discovering truths about nature In *An Instinct for Truth* Robert Pennock explores this scientific mindset and argues that what Charles Darwin called an instinct for truth knowledge and discovery has a tacit moral structure that it is important not only for scientific excellence and integrity but also for democracy and human flourishing In an era of post truth the scientific drive to discover empirical truths has a special value Taking a virtue theoretic perspective Pennock explores curiosity veracity skepticism humility to evidence and other scientific virtues and vices He explains that curiosity is the most distinctive element of the scientific character by which other norms are shaped discusses the passionate nature of scientific attentiveness and calls for science education not only to teach scientific findings and methods but also to nurture the scientific mindset and its core values Drawing on historical sources as well as a sociological study of more than a thousand scientists Pennock's philosophical account is grounded in values that scientists themselves recognize they should aspire to Pennock argues that epistemic and ethical values are normatively interconnected and that for science and society to flourish we need not just a philosophy of science but a philosophy of the scientist Resources in Education ,1998 **The Athenaeum** ,1909 **The Athenaeum** James Silk Buckingham, John Sterling, Frederick Denison Maurice, Henry Stebbing, Charles Wentworth Dilke, Thomas Kibble Hervey, William Hepworth Dixon, Norman Maccoll, Vernon Horace Rendall, John Middleton Murry, 1871 Body and Mind in Motion Glenna Batson, Margaret Wilson, 2014-06-01 Western contemporary dance and body mind education have engaged in a pas de deux for more than four decades The rich interchange of somatics and dance has altered both fields but scholarship that substantiates these ideas through the findings of twentieth century scientific advances has been missing This book fills that gap and brings to light contemporary discoveries of neuroscience and somatic education as they relate to dance Drawing from the burgeoning field of embodiment itself an idea at the intersection of the sciences humanities arts and technologies *Body and Mind in Motion* highlights the relevance of somatic education within dance education dance science and body mind studies *In Quest of the Universe* Theo Koupelis, 2010-02-04 Designed for the nonscience major In *Quest of the Universe* Sixth Edition is a comprehensive student friendly introduction to astronomy This accessible text guides readers through the development of historical and current astronomical theories to provide a clear account of how science works Koupelis distinct

The Case against Death Ingemar Patrick Linden, 2022-02-08 A philosopher refutes our culturally embedded acceptance of death arguing instead for the desirability of anti aging science and radical life extension Ingemar Patrick Linden s central claim is that death is evil In this first comprehensive refutation of the most common arguments in favor of human mortality he writes passionately in favor of antiaging science and radical life extension We may be on the cusp of a new human condition where scientists seek to break through the arbitrarily set age limit of human existence to address aging as an illness that can be cured The book however is not about the science and technology of life extension but whether we should want more life For Linden the answer is a loud and clear yes The acceptance of death is deeply embedded in our culture Linden examines the views of major philosophical voices of the past whom he calls death s ardent advocates These include the Buddha Socrates Plato Lucretius and Montaigne All have taught what he calls the Wise View namely that we should not fear death After setting out his case against death Linden systematically examines each of the accepted arguments for death that aging and death are natural that death is harmless that life is overrated that living longer would be boring and that death saves us from overpopulation He concludes with a dialogue concerning the badness of human mortality Though Linden acknowledges that The Case Against Death is a negative polemic he also defends it as optimistic in that the badness of death is a function of the goodness of life

Complexity and Creative Capacity Kelly Chapman, 2015-11-06 Complexity theories gained prominence in the 1990s with a focus on self organising and complex adaptive systems Since then complexity theory has become one of the fastest growing topics in both the natural and social

sciences and touted as a revolutionary way of understanding the behaviour of complex systems This book uses complexity theory to surface and challenge the deeply held cultural assumptions that shape how we think about reality and knowledge In doing so it shows how our traditional approaches to generating and applying knowledge may be paradoxically exacerbating some of the wicked environmental problems we are currently facing The author proposes an innovative and compelling argument for rejecting old constructs of knowledge transfer adaptive management and adaptive capacity The book also presents a distinctively coherent and comprehensive synthesis of cognition learning knowledge and organizing from a complexity perspective It concludes with a reconceptualization of the problem of knowledge transfer from a complexity perspective proposing the concept of creative capacity as an alternative to adaptive capacity as a measure of resilience in socio ecological systems Although written from an environmental management perspective it is relevant to the broader natural sciences and to a range of other disciplines including knowledge management organizational learning organizational management and the philosophy of science
